

Dear Hiring Manager,

I'm excited to be applying for the Data Engineer role at P&G. My aim as a software developer is to create applications that truly enhance the end user's experience. I would love to have a conversation about how my skills and contribution as a team member can really add value to your company.

One of my recent challenges was to develop a back-end server for payment processing. I implemented the Stripe API (organized around REST) using API keys to authenticate API requests. This server is currently running on an AWS EC2 instance.

I am a naturally curious and enthusiastic learner. I love using my tech skills to create amazing applications that serve the end user. I have become proficient as a Full-Stack software developer. I have a track record of being a strategic problem-solver who sees the best path to achieving the desired results while being frugal with resources.

I'm looking forward to learning more about this position!

Sincerely,
Dan Luk
